

BINAL DAVE

M.SC. DATA SCIENCE STUDENT | MACHINE LEARNING, PYTHON & DATA ANALYSIS

Dortmund, Germany | +49 160 1 270 960 | binaldave23@gmail.com | linkedin.com/in/binal-dave-25 993b305

PROFILE

M.Sc. Data Science student with 2+ years of professional Python and data-processing experience. Skilled in extracting, validating and analysing complex operational datasets with Python, pandas, NumPy, SQL and PostgreSQL. Experienced in predictive modelling, feature engineering, statistical evaluation and translating analytical outputs into practical decision support. Motivated to apply Data Science to industrial systems, resource efficiency and environmentally meaningful operational challenges.

PROFESSIONAL EXPERIENCE

Full Stack Developer (Python / Odoo) | Silent Infotech Pvt. Ltd.

Jul 2024 - Feb 2026 | Ahmedabad, India

- Developed production Python applications, analytical workflows and dashboards across CRM, accounting, sales, inventory and manufacturing data for multiple client projects.
- Extracted, transformed and validated operational datasets using Python, SQL and PostgreSQL; produced reports covering revenue, cost, margin, financial statements and operational KPIs.
- Validated more than one million records during a NetSuite-to-Odoo migration by reconciling year- and month-level amounts and quantities, then tracing mismatches through external identifiers.
- Built reusable REST integration components for mapping, transforming and synchronising data across Bill.com, ClickUp, Clover and QuickBooks, including validation and error handling.
- Wrote automated tests with pytest, investigated data and application defects, documented solutions and supported deployment and production issue resolution.
- Collaborated with project managers and business users to translate operational questions into maintainable data products and decision-ready reporting; received the Star Performance Award in April 2025.

Full Stack Developer - Trainee | Silent Infotech Pvt. Ltd.

Jan 2024 - Jul 2024 | Ahmedabad, India

- Built a foundation in Python backend development, SQL data handling, workflow automation, testing and support for live data-intensive software projects.

SELECTED DATA SCIENCE PROJECTS

Predictive Maintenance & Operational Risk Analysis | Python | pandas | NumPy | scikit-learn | Sensor Data

- Analysed machine and operational data to identify patterns associated with equipment failures and increased maintenance risk.
- Prepared and validated time-dependent datasets, handled missing and inconsistent observations and engineered condition-based features for modelling.
- Developed and compared classification models using precision, recall and F1-score, prioritising reliable identification of high-risk operating conditions over headline accuracy.
- Translated model outputs into interpretable risk indicators designed to support preventive-maintenance prioritisation and reduce avoidable operational disruption.
- Used exploratory analysis and statistical summaries to examine feature distributions, class imbalance and relationships between operating conditions and failure events.
- Structured preprocessing and evaluation steps as a reproducible workflow so modelling decisions and results could be reviewed and extended consistently.

SELECTED DATA SCIENCE PROJECTS (CONTINUED)

CRM Lead Prediction & Revenue Forecasting | Python | scikit-learn | pandas | PostgreSQL | Feature Engineering

- Developed predictive logic to estimate lead-closing dates from historical CRM records and engineered business features.
- Modelled expected sales-cycle duration so commercial teams could identify likely timing shifts before opportunities closed.
- Cleaned, transformed and validated operational CRM records before modelling, preserving consistent definitions across analytical and source-system outputs.
- Evaluated prediction quality with error-based metrics against historical outcomes and investigated recurring error patterns.
- Converted predicted dates and durations into an amortised revenue report to improve the timing of monthly revenue and budget estimates.
- Built decision-oriented dashboards combining expected revenue, project cost and margin for earlier resource and financial planning.
- Integrated analytical outputs into existing CRM workflows so users could review forecasts alongside source records and use them in routine planning decisions.
- Presented analytical outputs in business language, connecting model behaviour to expected cash timing, project economics and planning decisions.

TECHNICAL SKILLS

Data Science & ML: Python, pandas, NumPy, scikit-learn, statistical analysis, feature engineering, regression and classification

Data Engineering: SQL, PostgreSQL, ETL, REST APIs, data extraction, cleaning, validation and reconciliation

Evaluation & Reporting: MAE, RMSE, precision, recall, F1-score, cross-validation, KPI reporting and dashboards

Engineering: Git, Linux, pytest, FastAPI, debugging, documentation and production support

EDUCATION

M.Sc. Data Science | TU Dortmund University | Apr 2026 - Present | Dortmund, Germany

B.E. Computer Engineering | Government Engineering College, Rajkot | Aug 2020 - May 2024 | India

LANGUAGES & AVAILABILITY

Languages: English (C1) | German (A2, actively learning) | Gujarati (Native)

Availability: Working student, up to 20 hours per week | Hybrid or home-office arrangement
